Operations. Flying training was conducted at various bases prior to, during, and following World War I. On June 28, 1922, this training was centralized around San Antonio, Texas. Primary flying training took place at Brooks Field and advanced flying training at nearby Kelly Field. On August 16, 1926, an Air Corps Training Center was also established at San Antonio to supervise both primary and advanced flying training. In 1940, after the training activity expanded and more bases became available for training purposes, three regional training centers were created to supervise flying training in their respective geographical areas. The Air Corps Flying Training Command, established in January 1942, coordinated the activities of the three centers, which became subordinate components. A year later, the Technical Training Command and the Flying Training Command were merged into a general training command. When Air University merged with Air Training Command in 1993, it became known as Air Education and Training Command. The command consisted of Air Force Recruiting Service, two numbered air forces and the Air University. In addition to recruiting, its mission included **basic military and technical training**, flying training, and professional military education.
